

# WHAT'S NEW

## 1. AQUA ONE REEFSKIM PROTEIN SKIMMERS

Aqua One ReefSkin Protein Skimmers are designed to easily and effectively remove organic waste from aquarium water. The needle wheel impeller increases the contact area maximising efficiency. Simple, accurate control allows you to adjust the output quickly and easily. The result is cleaner, clearer water and healthier aquarium inhabitants.

## 2. REPTILE ONE LOW HEIGHT TERRARIUM

Reptile One's RTF low height terrariums are low profile and are not only perfect for terrestrial reptiles but a space saving solution for your living space. The low height enhances the ability of UVB light absorption by your reptile due to the reduced distance.

## DELTEC 1500I 24VDC PROTEIN SKIMMER

Introducing the Deltec 1500i 24VDC protein skimmer - suitable for aquariums from 700 litres- 1500 litres.

The 1500i expands the range of the next generation skimmers from Deltec, adding to the already successful 600i, 600ix, 1000i – rated by RiffNews as the best skimmer on the market, and 1000ix.

These skimmer models come with unique functional and safety features - for example: should the water level in the sump suddenly exceed the maximum depth for the skimmer, or the air feed become blocked, the new emergency overflow system prevents the

collection cup from overflowing thereby preventing the skimate overflowing back into the aquarium. As the water level rises within the protein skimmer the air feed to the pump will shut off automatically via the overflow protection, further reducing the chance of foam flooding the skimmer cup.

The hollow base design, where the water flows through to the level adjustment and indicator tubes, ensures that the water will exit the protein skimmer body from the lowest point, greatly reducing the chance of micro bubbles escaping the body, increasing air- water contact time and also reducing noise and turbulence within the protein skimmer body.

Removing the pump for cleaning and maintenance can be achieved in 20 seconds, making keeping the skimmer running at optimal efficiency, a breeze.

With the body of the skimmer being a cylinder and not tapering, all the small air bubbles can rise unhindered, fully saturated, and will only burst in the foam cup riser, adding to the efficiency and performance of the Deltec skimmers.

The 24VDC 1500i incorporates the SINEWAVE controller with soft start function, making for the quietest possible running, and includes a feeding function.
